

1 Introduction

This memo is for the Ordinator scheduling project with the goal of getting primary stakeholders in sync.

2 Status Update

- Writing to SAP
- Coding on the server side
- Academic Papers
- External Stay
- Problems and Issues

3 Writing to SAP

I have had discussions with people in Paris about writing to SAP. Specifically asked if it would be possible to write to table AFVC column ABLAD which is the column called "Unloading Point". This is possible but it will require all my source code to be uploaded to Total Energies servers, which I am a little reluctant to do as I will lose control over the research project.

4 Coding on the server side

Since our last meeting I have done a significant amount of coding on the server side of the application, most of it is related to the tactical model, the algorithm that schedules on the days, to make it dynamic and provide results that are satisfactory.

To reiterate the long term goal here refer to figure 1, 2, and 3. Figure 1 holds all the data needed to make the system function as well as capture all the changes that the end-users make based on the results of the algorithms.

Figure 1: Common database layer for all algorithms in the system. The database layer is initialized from the **SAP**, and also receives inputs from the user for **Resources** and **Timehorizons**.

Figure 2: The proposed model setup. The server creates one **Strategic** algorithm as shown in section 8.5, one **Tactical** algorithm as shown in section 8.6, and one for each **Supervisor** as shown in section 8.7, finally there one model for each **Technician** as shown in section 8.8

Figure 2 shows the setup where each hexagon is a mathematical algorithm that is optimizing a certain part of the scheduling process. Here you both have seen a little of the **Strategic** and the **Tactical**. These models will never be able of their own to model the scheduling process therefore user-interfaces are created for each of these stakeholders which is illustrated in figure 3.

Figure 3: Every algorithm has its own user interface. This means that there will be a view into the system that is unique for each kind of stakeholder.

There are more than these three layers, they serve to provide a high level visualization of what the code is aiming to do.

4.1 Separating Responsibilites

Brian mentioned at the previous meeting that for this kind of system it would be crucial that each stakeholder that we want to be part of the system has clearly defined boundaries for what they can and cannot change. In appendix

This means that there are internally in the server clear boundaries for what each user of the system can change.

5 Academic Papers

I unfortunately have to write academic papers even though we do not have solid results yet. The first paper is titled **Actor-based Large Neighborhood Search**, I am trying to complete it as soon as possible that we can get back to testing.

6 External Stay

I am going of external stay in Paris at a company called **Decision Brain** it is a company that creates maintenance scheduling software that resembles the kind of system that we are trying to develop. I am going there with the intention of learning how to best proceed with implementing the system that we are working on here at Total.

7 Problems and Issues

- "Customer" support
- Funding of the project
- Frontend development

7.1 "Customer" Support

The success of this project relies heavily on the support from you two. I made the deal with Sebastien Perrier while he was still in Esbjerg that if I made all the backend code where you two would like the code then his team would supply the manpower needed to develop the frontends.

Now the problem is that if I cannot convince the two of you it becomes really difficult to making this work.

7.2 Funding of the Project

The funding for the project is running out so I will not be able to come to Esbjerg as often as I have been previously. I will try to draft a proposal for a project after I come home from Decision Brain, they have a lot of experience with developing systems like the one that we are developing together.

7.3 Frontend Development

A correct implementation of the project will require a lot of frontend development work, which I do not have time to do alone. I am not use how to best solve this issue, especially as I lack the required experience to actually know what to ask for. There is also the issue that the backend code changes quickly.

8 Appendix

8.1 Illustrative Code Parts

8.2 All user status codes

```
struct UserStatusCodes  
    appr : bool,  
    smat : bool,  
    init : bool,  
    rdbl : bool,  
    qcap : bool,  
    rfrz : bool,  
    wmat : bool,  
    cmat : bool,  
    pmat : bool,  
    ...  
    dfrj : bool,  
    vpas : bool,  
    dfcr : bool,  
    ireq : bool,  
    atvd : bool,  
    awmd : bool,  
    dfex : bool,  
    dfap : bool,  
    awpr : bool,  
}
```

8.3 User status codes that the Strategic Algorithms can modify

```
struct StrategicUserStatusCodes {  
    work_order_numbers : Vec < WorkOrderNumber >,  
    sch : Option < bool >,  
    awsc : Option < bool >,  
    cmat : Option < bool >,  
    wmat : Option < bool >,  
    pmat : Option < bool >,  
    smat : Option < bool >,  
}
```

8.4 Mathematical Models

8.5 Strategic Model: A Knapsack Variant

Meta variables:

$$s \in S \quad (1)$$

$$\beta(\tau) \quad (2)$$

$$\tau \in [0, \infty] \quad (3)$$

Minimize:

$$\begin{aligned} & - \sum_{w \in W(\tau)} \sum_{p \in P(\tau)} \text{strategic_value}_{wp}(\tau) \cdot \alpha_{wp}(\tau) \\ & + \sum_{p \in P(\tau)} \sum_{r \in R(\tau)} \text{strategic_penalty} \cdot \epsilon_{pr}(\tau) \\ & - \sum_{p \in P(\tau)} \sum_{w1 \in W(\tau)} \sum_{w2 \in W(\tau)} \text{clustering_value}_{w1,w2} \cdot \alpha_{w1p}(\tau) \cdot \alpha_{w2p}(\tau) \end{aligned} \quad (4)$$

Subject to:

$$\begin{aligned} & \sum_{w \in W(\tau)} \text{work_order_work}_{wr} \cdot \alpha_{wp}(\tau) \leq \text{resource}_{pr}(\tau, \beta(\tau)) + \epsilon_{pr}(\tau) \\ & \forall p \in P(\tau) \quad \forall r \in R(\tau) \end{aligned} \quad (5)$$

$$\sum_{w \in W(\tau)} \alpha_{wp}(\tau) = 1 \quad \forall p \in P(\tau) \quad (6)$$

$$\alpha_{wp}(\tau) = 0, \quad \text{if } \text{exclude}_{wp}(\tau) \quad \forall w \in W(\tau) \quad \forall p \in P(\tau) \quad (7)$$

$$\alpha_{wp}(\tau) = 1, \quad \text{if } \text{include}_{wp}(\tau) \quad \forall w \in W(\tau) \quad \forall p \in P(\tau) \quad (8)$$

$$\alpha_{wp}(\tau) \in \{0, 1\} \quad \forall w \in W(\tau) \quad \forall p \in P(\tau) \quad (9)$$

$$\epsilon_{pr}(\tau) \in \mathbb{R}^+ \quad \forall p \in P(\tau) \quad \forall r \in R(\tau) \quad (10)$$

8.6 Tactical Model: A Resource Constrained Project Scheduling Problem Variant

Meta variables:

$$s \in S \quad (11)$$

$$\alpha(\tau) \quad (12)$$

$$\tau \in [0, \infty] \quad (13)$$

Minimize:

$$\sum_{o \in O(\tau, \alpha(\tau))} \sum_{d \in D(\tau)} tactical_value_{do}(\tau) \cdot \beta_{do}(\tau) + \sum_{r \in R(\tau)} \sum_{d \in D(\tau)} tactical_penalty \cdot \mu_{rd}(\tau) \quad (14)$$

Subject to:

$$\sum_{o \in O(\tau, \alpha(\tau))} work_o(\tau) \cdot \beta_{do}(\tau) \leq tactical_resource_{dr}(\tau) + \mu_{rd}(\tau) \forall d \in D(\tau) \quad \forall r \in R(\tau) \quad (15)$$

$$\sum_{d=earliest_start_o(\tau)}^{latest_finish_o(\tau)} \sigma_{do}(\tau) = duration_o(\tau) \quad \forall o \in O(\tau, \alpha(\tau)) \quad (16)$$

$$\sum_{d^* \in D_{duration_o(\tau)}(\tau)} \sigma_{d^*o}(\tau) = duration_o(\tau) \cdot \eta_{do}(\tau) \quad \forall o \in O(\tau, \alpha(\tau)) \quad \forall d \in D(\tau) \quad (17)$$

$$\sum_{o \in O(\tau, \alpha(\tau))} \eta_{do}(\tau) = 1, \quad \forall d \in D(\tau)$$

$$\sum_{d \in D(\tau)} d \cdot \sigma_{do1}(\tau) + \Delta_o(\tau) = \sum_{d \in D(\tau)} d \cdot \sigma_{do2}(\tau) \quad \forall (o1, o2) \in finish_start_{o1, o2} \quad (18)$$

$$\sum_{d \in D(\tau)} d \cdot \sigma_{do1}(\tau) = \sum_{d \in D(\tau)} d \cdot \sigma_{do2}(\tau) \quad \forall (o1, o2) \in start_start_{o1, o2} \quad (19)$$

$$\beta_{do}(\tau) \leq number_o(\tau) \cdot operating_time_o \quad \forall d \in D(\tau) \quad \forall o \in O(\tau, \alpha(\tau)) \quad (20)$$

$$\beta_{do}(\tau) \in \mathbb{R} \quad \forall d \in D(\tau) \quad \forall o \in O(\tau, \alpha(\tau)) \quad (21)$$

$$\mu_{rd}(\tau) \in \mathbb{R} \quad \forall r \in R(\tau) \quad \forall d \in D(\tau) \quad (22)$$

$$\sigma_{do}(\tau) \in \{0, 1\} \quad \forall d \in D(\tau) \quad \forall o \in O(\tau, \alpha(\tau)) \quad (23)$$

$$\eta_{do}(\tau) \in \{0, 1\} \quad \forall d \in D(\tau) \quad \forall o \in O(\tau, \alpha(\tau)) \quad (24)$$

$$\Delta_o(\tau) \in \{0, 1\} \quad \forall o \in O(\tau, \alpha(\tau)) \quad (25)$$

8.7 Supervisor Model: An Assignment Problem Variant

Meta variables:

$$z \in Z \quad (26)$$

$$\alpha(\tau) \quad (27)$$

$$\theta(\tau) \quad (28)$$

$$\tau \in [0, \infty] \quad (29)$$

Maximize:

$$\sum_{a \in A(\tau, \alpha(\tau))} \sum_{t \in T(\tau)} supervisor_value_{at}(\tau, \lambda_t(\tau), \Lambda_t(\tau)) \cdot \gamma_{at}(\tau) \quad (30)$$

Subject to:

$$\sum_{a \in A_o(\tau, \alpha(\tau))} \rho_a(\tau) = work_o(\tau) \quad \forall o \in O(\tau, \alpha(\tau)) \quad (31)$$

$$\sum_{t \in T(\tau)} \sum_{a \in A_o(\tau, \alpha(\tau))} \gamma_{at}(\tau) = \phi_o(\tau) \cdot number_o(\tau) \quad \forall o \in O(\tau, \alpha(\tau)) \quad (32)$$

$$\sum_{o \in O_w(\tau, \alpha(\tau))} \phi_o(\tau) = |O_w(\tau, \alpha(\tau))| \quad \forall w \in W(\tau, \alpha(\tau)) \quad (33)$$

$$\sum_{a \in A_o(\tau, \alpha(\tau))} \gamma_{at}(\tau) \leq 1 \quad \forall o \in O(\tau, \alpha(\tau)) \quad \forall t \in T(\tau) \quad (34)$$

$$\gamma_{at}(\tau) \leq feasible_{at}(\theta(\tau)) \quad \forall o \in O(\tau, \alpha(\tau)) \quad \forall t \in T(\tau) \quad (35)$$

$$\gamma_{at}(\tau) \in \{0, 1\} \quad \forall o \in O(\tau, \alpha(\tau)) \quad \forall t \in T(\tau) \quad (36)$$

$$\rho_a(\tau) \in [lower_activity_work_a(\tau), work_a(\tau)] \quad \forall a \in A(\tau, \alpha(\tau)) \quad (37)$$

8.8 Technician Model: Single Machine Scheduling Problem Variant

Meta variables:

$$t \in T(\tau) \quad (38)$$

$$\alpha(\tau) \quad (39)$$

$$\gamma(\tau) \quad (40)$$

$$\tau \in [0, \infty] \quad (41)$$

Maximize:

$$\sum_{a \in A(\tau, \gamma_t(\tau))} \sum_{k \in K(\gamma(\tau))} \delta_{ak}(\tau) \quad (42)$$

Subject to:

$$\sum_{k \in K(\gamma(\tau))} \delta_{ak}(\tau) \cdot \pi_{ak}(\tau) = \text{activity_work}_a(\tau, \rho(\tau)) \cdot \theta(\tau) \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad (43)$$

$$\lambda_{a21}(\tau) \geq \Lambda_{a1\text{last}(a1)}(\tau) + \text{preparation}_{a1,a2} \quad \forall a1 \in A(\tau, \gamma_t(\tau)) \quad \forall a2 \in A(\tau, \gamma_t(\tau)) \quad (44)$$

$$\lambda_{ak}(\tau) \geq \Lambda_{ak-1}(\tau) - \text{constraint_limit} \cdot (2 - \pi_{ak}(\tau) + \pi_{ak-1}(\tau)) \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad (45)$$

$$\delta_{ak}(\tau) = \Lambda_{ak}(\tau) - \lambda_{ak}(\tau) \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad (46)$$

$$\lambda_{ak}(\tau) \geq \text{event}_{ie} + \text{duration}_{ie} - \text{constraint_limit} \cdot (1 - \omega_{akie}(\tau)) \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad \forall i \in I(\tau) \quad \forall e \in E(\tau) \quad (47)$$

$$\Lambda_{ak}(\tau) \leq \text{event}_{ie} + \text{constraint_limit} \cdot \omega_{akie}(\tau) \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad \forall i \in I(\tau) \quad \forall e \in E(\tau) \quad (48)$$

$$\lambda_{a1}(\tau) \geq \text{time_window_start}_a(\beta(\tau)) \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad (49)$$

$$\Lambda_{a\text{last}(a)}(\tau) \leq \text{time_window_finish}_a(\beta(\tau)) \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad (50)$$

$$\pi_{ak}(\tau) \in \{0, 1\} \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad (51)$$

$$\lambda_{ak}(\tau) \in [\text{availability_start}(\tau), \text{availability_finish}(\tau)] \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad (52)$$

$$\Lambda_{ak}(\tau) \in [\text{availability_start}(\tau), \text{availability_finish}(\tau)] \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad (53)$$

$$\delta_{ak}(\tau) \in [0, \text{work}_{a_to_o(a)}(\tau)] \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad (54)$$

$$\omega_{akie}(\tau) \in \{0, 1\} \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad \forall k \in K(\gamma(\tau)) \quad \forall i \in I(\tau) \quad \forall e \in E(\tau) \quad (55)$$

$$\theta_a(\tau) \in \{0, 1\} \quad \forall a \in A(\tau, \gamma_t(\tau)) \quad (56)$$
